# FACT SHEET

What is S4FE?

S4FE is a global network based on blockchain technology for the registration of (stolen or lost) property, i.e. valuables or objects. The network is accessible to everyone and allows users to register, search, verify and identify objects in the blockchain. Such objects can represent almost any form of property that represents value to owners.

How Does it Work?

S4FE has developed an easy-to-use interface through which users can perform the following functions:

- Register property / objects in the network anonymously
- Report theft or loss in real time
- Make stolen goods recognizable to all users worldwide
- Check or identify found and offered items
- Report stolen or lost items on the network
- Rewards for discovering and returning of objects
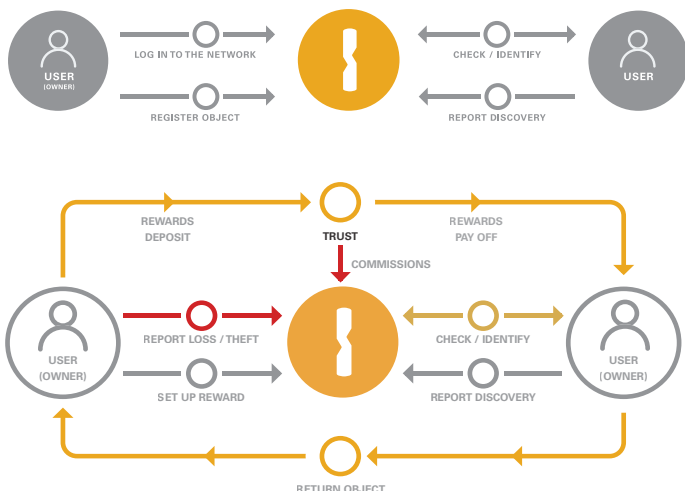

Which Goal Pursues S4FE?

S4FE offers everyone access to a technology that enables to protect property and to check and identify objects found or offered for sale. The goal is to effectively protect property and address the growing global problem of theft, as well as reduce related crimes such as receiving or acquisitive crime. Security is a fundamental need of the public and should be self-evident. Unfortunately, this is not the case and therefore S4FE's goal is to provide security to all users for their property and trade in goods.

| Identify | Protect | Reward | Protect |

Is There a Market?

Theft crime is a growing global problem and one of its causes is that ownership is not clearly identifiable. There is no search engine that allows a real-time search for stolen or lost objects. S4FE closes this gap through a public network in which objects are registered. Those objects can be searched for or they can be verified, whether stolen or lost, for example when an object is found or shall be sold as stolen property. This unmet market demand has a potential of over one billion lost and stolen objects, representing a potential of over one billion transactions for S4FE.

Facts

1 billion lost objects annually
500 million lost objects
worldwide annually (USA / DE)

Market Potential
> 1,000,000,000 cases
= transactions

> 20,000,000 stolen objects
annually (EU)
only an average of 25% of all
thefts and losses are reported.

Market Share
0.1% cases = 1,000,000
transactions

S4FE

Which Goal Pursues S4FE?

S4FE has developed four profit centers, which generate revenue for the company and at the same time allow to offer its core functions (register, check, identify and report) for free:

• Commissions on rewards:

When a user (finder) discovers an object that is reported lost or stolen, a first reward (finder's reward) is granted. If this discovery leads to the object being returned to the rightful owner, a second reward (success fee) is granted. The amount of rewards is determined by the owners in Ether when they report an object as lost or stolen. S4FE receives a commission of 25% of all paid rewards.

• Cooperation in public:

S4FE will cooperate with public partners. Such partners are e.g. law enforcement agencies, government organizations, and any institution related to crime in general or its control. The partners will use the system to improve their own success rate and efficiency, which in turn leads to a higher volume of rewards from which S4FE participates.

• Cooperations commercial:

S4FE will also partner with companies that want to expand their portfolios by integrating the system to add value to their customers. Such companies are e.g. insurance companies, travel and tourism companies, manufacturers, retailers and wholesalers, rental companies, etc. This will increase the volume of rewards.

• Online Shop:

S4FE will market own products via an online shop and constantly develop new products. A satellite tracking device, the S4FE Tracker, as well as an own coding system, the S4FE C0D3, are already in development.

In addition, S4FE will offer services to commercial clients in the areas of risk assessment and forecasting. There is a high demand for such a service from companies whose business models and strategies are based on those data.

Token Facts

• Token Name: S4FE
• Token Category: Utility Token
• Network: Ethereum
• Start of token sale: Q4 2018
• Amount issued: 1.000.000.000
• Type of issue: Fix
• Soft Cap: 5.000.000 US $
• Hard Cap: 50.000.000 US $
• Currencies: BTC, ETH, BCH, XRP, FIAT
Token prices are determined in Ether before the sale. The sale is done with fixed prices and is measured in blocks on the Ethereum Blockchain until every 300 Millions of tokens were sold.

The S4FE Token is based on the ERC-20 Token Standard.
